Smart™ Button

Developed to enhance the lives of people with mobility issues.

Sm@rt Button

SmartButton has been designed for people with Mobility Issues and assists them when using pedestrian crossings.

Crossings for people on mobility scooters, wheelchairs and using assisted walking aids (zimmer frames etc) can be extremely awkward and in some cases dangerous to manoeuvre into a position to be able to press the traffic light button safely.

Sm@rt Button can be used on various items

Different Applications

SmartButton fitted onto the handlebar of a mobility scooter, wheelchair or walking frame makes the push button on a traffic light unit redundant on pedestrian Crossings. The user merely rides/ walks to the kerb edge of the crossing and presses their SmartButton.

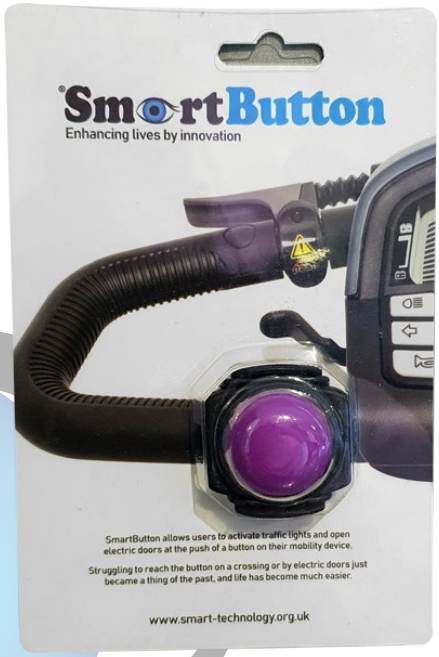

Simply pressing the button with the thumb initiates the traffic light change sequence on a pedestrian crossing fitted with Our SmartSwitch system.

No more frustration or embarrassment trying to move into a position to press a crossing button.

The SmartButton can also open electric doors fitted with SmartSwitch Lite which enhances peoples lives and makes life easier for them.

SmartButton units are
available from Sight & Sound
